The significant achievement and the desire to be more responsive to customers' requirements prompted **Ocrim S.p.A.** to establish, in 1965, a Milling Technology School to provide vocational training to qualified technicians for the operation and maintenance of the many Ocrim mills installed worldwide. Ocrim said that thanks to its experience and to the high quality of the theoretical and practical courses offered, the Milling Technology School has attained a high level of prestige around the world. So far, more than 2,500 students have been trained at the school to become chief millers, laboratory analysts and maintenance foremen. These future experts are coming from every continent.

The teaching staff is composed of project managers, technologists, chemists, chief erectors and chief millers of proved capacity and experience. The courses vary in length depending on trainees' skill and are in Italian or other languages according to the requirements of participants. The training program also includes visits to plants recently installed by Ocrim, in particular silo plants, flour mills, durum mills and maize mills. Trainees are accommodated in rooms in Ocrim's comfortable residence quarters situated close to the historic town center. The residence, composed of 15 flatlets capable of accommodating 40 persons, is equipped with a television room and other recreational facilities. For more information: info@ocrim.com
